

Risk Management Strategies for Life Sciences and Healthcare Technology Companies

Life Sciences Collaborative (Philadelphia, PA)
3.8.16

Leaders of growing life sciences or healthcare technology companies must understand and manage both insurable and non-insurable risks. "Risk Management Strategies for Life Sciences and Healthcare Technology Companies" is designed to explore the risks founders, directors and management teams address during business startup, growth and exit. Board risk, contractual risk, financial risk, cap table structure, data privacy and products liability are just a few of the topics that will be addressed.

The 3rd annual conference features panels of industry advisors and regional industry leaders with real world experience who will address the hidden and obvious risks business leaders should be prepared to address.

Ryan Udell, co-chair of the Corporate and Securities Group and Life Sciences Collaborative Advisory Board Member, participates on the panel, "Risk Mitigation for Managing the Business of the Business."
